Mohamed Yasar Arafath

Software Engineer

+91-7448841349 | yasararafathpers@gmail.com | HackerRank | LinkedIn | Chennai (Willing to relocate)

Career Objective

MCA graduate with software development experience in Python, Java, C, and PHP, along with knowledge of Spring Boot, object-oriented programming, REST APIs, and SQL databases. Developed web applications and a network security utility, with experience in debugging, automation scripting, log analysis, and root cause investigation. Currently contribute to Windows-based application validation and hardware-software integration at Vortex Engineering. Seeking a Software Engineer role focused on backend development, application engineering, and reliable software solutions.

Skills

Programming Languages: Java, Python, C, PHP
Frameworks & Libraries: Spring Boot, Bootstrap, Playwright
Backend & APIs: REST API, Postman, Swagger, Apache, mod_wsgi
Databases: SQL, MySQL, SQLite, Relational Database Design
Development Tools: Git, Jenkins, Docker, Kubernetes, CI/CD
Operating Systems: Windows, Linux, System Configuration
Automation & Scripting: PowerShell, Batch Scripting, Python Automation
Testing: Functional, Integration, Regression, End-to-End Testing
Core Concepts & Protocols: OOP, SDLC, TCP/IP, ARP, SSH, SMTP

Experience

Vortex Engineering Pvt Ltd **January 2026 – Present**
QA Intern – R&D *Chennai, India*

- Executed 1,390+ test cases covering end-to-end Windows-based ATM application workflows, from application validation through transaction-ready releases.
- Identified and tracked 400+ defects involving application functionality, security, communication, UI behavior, operating system restrictions, and system hardening.
- Analyzed application logs, Windows Event Logs, and communication diagnostics to investigate failures, perform root cause analysis, and support defect resolution.
- Validated ATM transaction workflows and hardware-software integration to ensure reliable communication between applications and peripherals.
- Tested Windows operating system configurations, application dependencies, security controls, and system-level restrictions affecting application functionality.
- Developed PowerShell and Batch scripts to automate repetitive validation and configuration tasks and improve engineering efficiency.
- Validated XFS and NCR Direct Connect communication workflows between ATM applications and hardware peripherals.

Academic Projects

URL Shortener | *Python, SQLite, Apache, mod_wsgi* **May 2025**

- Developed a URL shortening service using Python and SQLite, with Apache and mod_wsgi for deployment.
- Implemented request handling and database operations for a reported workload of 100+ concurrent requests per second.

Bookshop Management System | *PHP, MySQL, Bootstrap* **March 2023**

- Developed a web-based bookshop management application using PHP, MySQL, and Bootstrap with a relational database schema.
- Optimized database queries, achieving a reported 40% improvement in query execution time.
- Implemented user authentication using bcrypt password hashing.

ARP Spoof Detector | *C, Linux, libpcap* **May 2025**

- Developed a Linux-based network security utility in C to detect potential ARP spoofing attacks using Libpcap.
- Implemented packet capture, abnormal ARP traffic detection, and detailed packet logging.
- Added automatic network interface detection and root privilege checks.

Certifications

- Learn the Art of Hacking Through Programming – SNA Academy
- Developing Secure Software – The Linux Foundation
- Introduction to Linux – edX

Achievements

- Won 2nd Prize in the Debugging Challenge at AM Jain College (2024), identifying and resolving software defects under time constraints among 50+ teams.
- Won 2nd Prize in the ML/AI Technical Quiz at Guru Nanak College (2024), demonstrating knowledge of AI and machine learning fundamentals.

Education

Measi Institute of Information Technology, Chennai **May 2025**
Master of Computer Applications (MCA) – CGPA: 7.2/10

The New College, Chennai **April 2023**
B.Com. Information System Management – CGPA: 6.9/10
